**Attachments:** 13-3475.pdf  
**Importance:** High

Sonia,  
Thank you for your comments on the determination of nonsignificance for the Washington State Department of Fish and Wildlife (WDFW) regarding the Modrow Fish Trap Upgrade project (ECY 13-3475).

### **FLOODPLAINS MANAGEMENT:**

WDFW is conducting a no net rise feasibility analysis and will provide certification to show that the proposed project is designed to keep any rise in 100 year flood levels to show no net rise in the base flood elevation. This information will be provided in our application materials to Cowlitz County.

### **WASTE 2 RESOURCES**

Clean fill will be used for any fill used during the construction of the Modrow Trap. Any materials removed from the site during construction will be disposed of at an approved facility out of the flood zone.

### **SEPA REVIEWER**

### **WATER QUALITY**

Erosion control measures will be in place before any clearing, grading, or construction to prevent stormwater runoff from carrying soil and other pollutant into surface water or stormdrains leading to waters of the state. WDFW understands that sand silt, clay particles and soil are considered to be pollutants. WDFW understands that discharge of sediment laden water is a violation of chapter 90.48 RCW Water Pollution Control and WAC 173-201A and subject to enforcement action. Any disposed materials will not be placed in areas that will enter waters of the state.

Thank you for your attention to this project.  
Cindy
